Sensors and systems for wind turbines

To survive on the energy market, wind turbines need to be powerful and efficient. Besides high uptime, suitability for all climatic zones is absolutely necessary. Plant operators have special demands on the components installed to ensure that they stand up to different environmental conditions. Besides resistance to high temperature fluctuations this also includes shock and vibration resistance. The sensors and systems from ifm electronic are optimised for these different, high demands on performance – at an excellent price / performance ratio.

Diverse approvals certify their reliable operation. Wind energy systems in a 'cold climate' design are not uncommon today. These systems are operational at down to -30 °C, but the survival temperature for a safe standby condition goes down to -40 °C. ifm electronic has developed sensors to meet this special challenge. They are marked in this brochure by the CCV symbol (snowflake).

ifm electronic – close to you!

Hydraulic pitch system

Hydraulic pitch system

The rotational speed of the wind turbine is controlled via the angle of the rotor blades. The hydraulic adjustment (pitch) is monitored using pressure sensors.

Azimuth drive

Position of the nacelle

High-resolution absolute encoders detect the angle of rotation (azimuth) of the nacelle. Even after power failure, the absolute encoders immediately detect the position; no referencing is required.

Speed monitoring low-speed side

Speed monitoring rotor

To prevent destruction caused by over-speed, the rotational speed is detected using inductive sensors and evaluated by a safety-related speed monitor. The inductive sensors operate reliably at down to -40 °C.

Safe speed monitor down to -40 °C

Type	U _b [V]	In-puts	Input function	Setting range [puls. / min.]	Setting range [Hz]	Out-puts analog	Out-puts relays	Out-puts transist.	Order no.

Temperature monitoring

Temperature monitoring

ifm electronic offers Pt100 / Pt1000 temperature sensors for different power units as probe or contact sensors. The head transmitter converts the Pt100 / Pt1000 signals into an analogue signal in accordance with the standard.

Pt100 probe sensors

Type	Measuring range [°C]	Diameter [mm]	Cable material	Sensor element	Dynamic response T05 / T09 [s]	Order no.

Rotor lock

Lock monitoring rotor lock

The rotor is locked for maintenance reasons. To ensure that the rotor lock is in place, the magnetic sensor M95004 with its 3 programmable switch points can signal the current condition (locked / partly locked / unlocked).

 Mechatronic rotor lock sensor with 3 switch points

Type	Dimensions [mm]	Sensing range [mm]	Material	U_b [V]	Protection	f [Hz]	I_{load} [mA]	Order no.
