TD Series Temperature Transmitter with Local Display

One-piece sanitary construction • 2-wire electronics • High accuracy
The TD Series temperature transmitters monitor the temperature of liquids in sanitary applications such as food and beverage processing and pharmaceutical applications.

The one-piece housing features integrated electronics, a process connector, and a Pt1000 Class “A” RTD probe that are laser welded for a water-tight, factory calibrated IP69K sealed sensor.

Robust and durable, the TD transmitters are constructed of 316 stainless steel. The units are corrosion-resistant against chemicals and harsh industrial solvents.

The 2-wire loop powered transmitters are pre-scaled for ranges of 0…100 °C and 0…300 °F. Applications requiring different ranges can be scaled with a programming tool via IO-Link.

High performance temperature transmitter at a great price.

- Simple to install 2-wire analog signal
- High accuracy at critical process temperatures (calibrated accuracy of 0.5 °F)
- Process connector and wetted parts meet all 3A requirements
- Fast response time of temperature change: 50% in 1 second and 90% in 3 seconds
- Transmitter with LED display indicates local temperature measurement
- Transmitter can be scaled in any range between -58…302 °F

The TD temperature transmitters are designed to perform in the harshest environments. Completely sealed housing eliminates liquid ingress.

Standard 2-wire loop power operation with an innovative 4-digit LED display for a unique, easy to implement or retrofit transmitter with local indication of the measured temperature.
Designed and tested to withstand the harshest sanitary environments

High performance polymer display window is resistant to high temperatures and aggressive cleaners. The proven window sealing design eliminates issues with fluid ingress.

2-wire loop power operation for easy installation in typical transmitter applications.

Highly engineered tip design ensures fast response time with constant and repeatable measurement from -58 to 302 °F (-50 to 150 °C). The TD minimizes thermal mass and locates the RTD element precisely with constant force and position.

Full 316L stainless steel construction eliminates corrosion that compromises instrument integrity.

State-of-the-art laser welded construction creates a hermetically sealed one-piece device.

1-piece design is factory calibrated and tested during assembly which guarantees out-of-the-box performance.

Ideally suited for...

Heat exchanger fluid temperatures are critical measurements in process applications. The TD transmitter is an ideal solution for monitoring their process fluids. The 3A authorized one-piece construction offers the highest level of integrity in sanitary applications.

The TD temperature transmitter reliably monitors the fluid temperature in a CIP application. Its fast reacting design responds to temperature changes of 50% in 1 second and 90% in 3 seconds (T05 and T09).

The TD transmitter offers a compact measuring system. Its easy to install small diameter, low profile housing provides efficient thermal decoupling to protect the electronics without compromising mechanical durability.

Technical specs

- Operating voltage: 18...32 V DC
- Analog output: 4...20 mA
- Current consumption: < 50 mA
- Resolution of analog output: 0.1 K
- Accuracy of analog output: ± 0.3 + (± 0.1% MS) K*
- Pressure rating: -1...150 bar
- Ambient temperature: -13...176 °F (-25...80 °C)
- Maximum measuring range: -58...302 °F (-50...150 °C)
- Programmable: IO-Link
- Housing: 316L, fully welded
- LED display: 4-digit red
- Protection: IP 69K
- Dynamic response: 1/3 sec. (according to DIN EN 60751)

* MS = set measuring span

Applications that require different ranges can be scaled with the programming tool IO-Link. IO-Link unlocks the intelligence of sensors to provide users with a large amount of information such as diagnostic messaging and parameter data.

About IO-Link

IO–link is a manufacturer-independent point-to-point connection technology for sensors and actuators in factory automation. It can be used to automatically parameterize sensors, diagnose plant conditions and transmit measured values.

An international consortium developed IO-Link

IO-Link originated from a group of leading sensor and actuator manufacturers who developed a protocol to help bring intelligent sensor data back to the control system. The main goal of the consortium was to enable users to extract sensor intelligence without adding cost.

ifm is making the commitment to IO-Link by producing more IO-Link-enabled sensors such as the TD transmitter for this new sensor communication interface.
ifm’s new TD transmitter is a more reliable alternative to traditional sensors

- High accuracy (Class A) Pt1000 RTD
- Eliminates the need to match the RTD and transmitter on the factory floor
- Transmitter with 4-digit display
- One-piece, 316 stainless steel housing
- IP69K washdown rated with 3A authorization

**Challenge**

Traditional sensors with connection head and well assemblies are prone to damage from moisture ingress. They require costly calibration and matching of the transmitter with the RTD probe. The assemblies do not have displays for local indication.

**Solution**

The Pt1000 sensor element, evaluation electronics and LED display are calibrated to operate as a system solution for your process monitoring. The one-piece device eliminates wiring issues and moisture ingress.

Delivered completely assembled, calibrated and ready to install for “Plug and Play” operation

**Starting List Price**

$210

Why select ifm for your sensors and controls needs?

ifm people. The ifm team of employees is committed to helping you succeed in your business. We directly service and work with over 20,000 customers in the US.

ifm products. For over 40 years, ifm has developed, manufactured, and marketed sensors to industries that include assembly and robotics, automotive, material handling, packaging, metal forming, plastics, and food and beverage. We offer a complete family of position sensors, fluid sensors, diagnostic systems, networking products, and wiring solutions.

Quality. There can be no compromise in the quality and reliability of sensors that are applied in your production facility. The ifm new product development process incorporates specific testing for sensors and controls to withstand environments with shock and vibration, electrical noise and temperature fluctuations.

Investment in R&D. Developing new products that increase uptime and productivity is a core belief of our company. We apply practical innovation to simplify technology and develop products that can have a positive impact on your production process.

Application know-how. We have over 40 years of experience in working with industrial automation applications. Our knowledgeable team of technical support engineers will work with you to recommend the right solution, the first time.

ifm business philosophy. ifm provides a knowledgeable and courteous service center team to assist with order placement and technical support. We offer an efficient distribution center for accurate and on-time delivery of products. ifm publishes list prices in literature and on our website, and we always stand behind the quality and performance of our products.

Global presence with local focus. With more than 4,800 dedicated ifm employees in over 70 countries, you can count on local support all over the world.

ifm efector – close to you!
