HAZARDOUS (CLASSIFIED) LOCATION
CLASS I, DIVISION 1, GROUPS A, B, C, D
CLASS II, DIVISION 1, GROUPS E, F, G
CLASS III, DIVISION 1

Any Simple Apparatus or approved device with Entity Concept parameters \((V_{\text{max}}, I_{\text{max}}, C_i, L_i)\)
appropriate for connection to Associated Apparatus with Entity Concept parameters listed in Table 1.

Any Simple Apparatus or approved device with Entity Concept parameters \((V_{\text{max}}, I_{\text{max}}, C_i, L_i)\)
appropriate for connection to Associated Apparatus with Entity Concept parameters listed in Table 1.

NOTES:
1. The Entity Concept allows interconnection of intrinsically safe and associated apparatus not specifically examined in combination as a system when the approved values of \(V_{\text{oc}}\) and \(I_{\text{sc}}\) for the associated apparatus are less than or equal to \(V_{\text{max}}\) and \(I_{\text{max}}\) for the intrinsically safe apparatus and the approved values of \(C_a\) and \(L_a\) for the associated apparatus are greater than \(C_i + C_{\text{cable}}\), \(L_i + L_{\text{cable}}\), respectively for the intrinsically safe apparatus.
2. “Simple Apparatus” is defined as a device that will neither generate nor store more than 1.2 V, 0.1 A, 20 uJ or 25 mW.
3. Wiring methods must be in accordance with the National Electrical Code, ANSI / NFPA 70, Article 504 and ANSI / ISA-RP12.6.
4. Barriers shall not be connected to any device that uses or generates in excess of 250 V rms or DC unless it has been determined that the voltage is adequately isolated from the barrier.
5. Single channel models use either input terminals 1, 2 & 3 or 4, 5 & 6.
6. When the field devices are contact closures, resistors \(R_1\) and \(R_2\) (when applicable) must be connected as shown in the diagrams above for proper performance. \(R_2\) should be as close as possible to the contact closure. \(R_2\) must be \(\geq 400 \Omega\) and \(\leq 2\, \text{k}\Omega\), and \(R_1\) must be \(10\, \text{k}\Omega\ ± 5\%\). Note, resistor \(R_1(a)\) is integrated in most N0 barriers and is activated by the S1b / S2b slide switches (slide switch S3 in others).
7. Any combination of up to 10 channels of the barriers listed in Table 1 may be connected in parallel and connected to a simple apparatus in a hazardous location. \(R_2\), if used, must be rated 0.25 W minimum if 2-3 channels are connected in parallel and 0.5 W minimum if 4-10 channels are connected in parallel. If 2-3 channels are connected in parallel the total cable inductance must be limited to 10 mH for Groups A and B, 37 mH for Groups C and E, and 80 mH for Groups D, F, and G. If 4-10 channels are connected in parallel the total cable inductance must be limited to 1 mH for Groups A and B, 3.8 mH for Groups C and E, and 7 mH for Groups D, F, and G.
8. The barriers must be installed in an enclosure meeting the requirements of ANSI / ISA S82.

HAZARDOUS (CLASSIFIED) LOCATION
CLASS I, ZONE 0 OR 1, GROUPS IIC, IIB, IIA or CLASS I, DIVISION 1, GROUPS A, B, C, D
CLASS II, DIVISION 1, GROUPS E, F, G
CLASS III, DIVISION 1

NON-HAZARDOUS LOCATION
CLASS I, ZONE 2, GROUPS IIC, IIB, IIA or CLASS I, DIVISION 2, GROUPS A, B, C, D

NOTES:
1. The intrinsically safe wiring must be installed in accordance with the Canadian Electrical Code CSA C22.1, Part 1, Appendix F.
2. Barriers listed in Table 1 shall not be connected to any device that uses or generates in excess of 250 V rms or DC unless it has been determined that the voltage is adequately isolated from the barrier. Barriers listed in Table 2 shall not be connected to any device that uses or generates in excess of 60 V rms or DC unless the voltage is limited by an adequate means.
3. Single channel models use input terminals 4, 5 and 6 only.
4. When the field devices are contact closures, resistors R1 and R2 must be connected as shown in the diagrams above for proper performance. R2 should be as close as possible to the contact closure. R2 must be $\geq 400 \Omega$ and $\leq 2 \, k\Omega$, and R1 must be $10 \, k\Omega \pm 5\%$.
5. Any combination of up to 10 channels of the barriers listed in Table 1 or Table 2 may be connected in parallel and connected to a switch in a hazardous location. R2, if used, must be rated 0.25 W minimum if 2-3 channels are connected in parallel and 0.5 W minimum if 4-10 channels are connected in parallel.
6. WARNING: Substitution of components may impair intrinsic safety and/or suitability for use in Class I, Division 2, Groups A, B, C, D or Class I, Zone 2, Groups IIC, IIB, IIA.

ADVERTISSEMENT: La substitution de composants peut compromettre la sécurité intrinsèque.

The Entity Concept allows interconnection of intrinsically safe and associated apparatus not specifically examined in combination as a system when the approved values of Voc and Isc for the associated apparatus are less than or equal to Vmax and Imax for the intrinsically safe apparatus and the approved values of Ca and La for the associated apparatus are greater than Ci + Ccable, Li + Lcable, respectively for the intrinsically safe apparatus.

Connection to ground is not required.

The following models with part number greater than 100000 are approved for mounting in Class I, Zone 2, Groups IIC, IIB, IIA or Class I, Division 2, Groups A, B, C, D hazardous (classified) location: N0030A.
