1 Preliminary note

1.1 Symbols used

► Instruction
> Reaction, result

[...] Designation of pushbuttons, buttons or indications
→ Cross-reference

Important note:
Non-compliance can result in malfunctions or interference.

2 Safety instructions

• Please read this document prior to set-up of the unit. Ensure that the product is suitable for your application without any restrictions.

• If the operating instructions or the technical data are not adhered to, personal injury and/or damage to property can occur.

• Check the compatibility of the product materials (→ chapter 12 Technical data) with the media to be measured in all applications.

• Use in gases at pressures > 363 PSI (25 bar) only after contacting the manufacturer ifm.
3 Functions and features

The unit monitors the system pressure of machines and plants.

Applications

Type of pressure: relative pressure

<table>

<td>290</td>
</tr>
</tbody>
</table>

MPa = bar ÷ 10 / kPa = bar × 100

Avoid static and dynamic overpressure exceeding the given overload pressure by taking appropriate measures.

The indicated bursting pressure must not be exceeded.

Even if the bursting pressure is exceeded only for a short time, the unit may be destroyed. NOTE: Risk of injury!

Use in gases at pressures > 363 PSI (25 bar) only after contacting the manufacturer ifm..

High-pressure units (5 802 PSI / 400 bar) are supplied with an integrated damping device to comply with the regulations for UL approval and to avoid any risk of injury in case of bursting when bursting pressure is exceeded.

- When the damping device is removed the damping device can become unusable.
- When the damping device is removed the unit can no longer be used under UL conditions.

If you have any questions, please contact ifm electronic’s sales specialists.
4 Function

4.1 Communication, parameter setting, evaluation

- The unit displays the current system pressure.
- It generates 2 output signals according to the parameter setting.

<table>
<thead>
<tr>
<th>OUT1</th>
<th>• Switching signal for process value; IO-Link.</th>
</tr>
</thead>
<tbody>
<tr>
<td>OUT2</td>
<td>2 options</td>
</tr>
<tr>
<td></td>
<td>• Switching signal for process value.</td>
</tr>
<tr>
<td></td>
<td>• Diagnostic signal (output 2 is inactive in case of a fault).</td>
</tr>
</tbody>
</table>

- The following function is available via IO-Link (OUT1):
  Reading the current process value, changing the parameters and transferring them to other units of the same type using the FDT service program ifm Container or other parameter setting tools with IO-Link capability.
  The program library of the available DTM objects and the IO Device Description (IODD) are available at www.ifm.com → Service → Download.

4.2 Switching function

OUTx changes its switching state if it is above or below the set switching limits (SPx, rPx). The following switching functions can be selected:

- Hysteresis function / normally open: \([\text{OU}x] = [\text{Hno}]\) (→ fig. 1).
- Hysteresis function / normally closed: \([\text{OU}x] = [\text{Hnc}]\) (→ fig. 1).
  First the set point (SPx) is set, then the reset point (rPx) with the requested difference.

- Window function / normally open: \([\text{OU}x] = [\text{Fno}]\) (→ fig. 2).
- Window function / normally closed: \([\text{OU}x] = [\text{Fnc}]\) (→ fig. 2).
  The width of the window can be set by means of the difference between SPx and rPx. SPx = upper value, rPx = lower value.
4.3 Diagnostic function

Output 2 is used as diagnostic output based on the DESINA specification if [OU2] = [dESI].

- If there is no fault, the output is switched and carries UB+ (if P-n = PnP) or UB- (if P-n = nPn).
- In case of malfunctions in the following areas, the output is inactive:
  - Measuring cell defect,
  - short circuit in output 1

5 Installation

⚠️ Before mounting and removing the sensor, make sure that no pressure is applied to the system.

- Insert the unit in a ¼“ NPT process connection.
- Tighten firmly.
6 Electrical connection

The unit must be connected by a qualified electrician.
The national and international regulations for the installation of electrical equipment must be adhered to.
Voltage supply to EN50178, SELV, PELV.

- Disconnect power.
- Connect the unit as follows:

| Pin 1 | Ub+ |
| Pin 3 | Ub- |
| Pin 4 (OUT1) | • binary switching output pressure monitoring; IO-Link |
| Pin 2 (OUT2) | • binary switching output if [OU2] = [Hno], [Hnc], [Fno] or [Fnc]  
| | • diagnostic output if [OU2] = [dESI] |

Core colours of ifm sockets:
1 = BN (brown), 2 = WH (white), 3 = BU (blue), 4 = BK (black)
7 Operating and display elements

1 to 8: Indicator LEDs
- LED 1 to LED 4 = system pressure in unit of measurement as indicated on the label.
- LED 4 not used for units with 3 adjustable units of measurement.
- LEDs 5 and 6 not used.
- LED 7, LED 8 = switching state of the corresponding output.

9: Alphanumeric display, 4 digits
- Indication of the current system pressure.
- Indication of the parameters and parameter values.

10: Set pushbutton
- Setting of the parameter values (scrolling by holding pressed, incremental by pressing briefly).

11: Mode/Enter pushbutton
- Selection of the parameters and acknowledgement of the parameter values.
8 Menu

8.1 Menu structure
### 8.2 Explanation of the menu

<table>

| LO           | Minimum value memory for system pressure (only PN7204 and PN7209). |
| dS1/dS2      | Switch-on delay for OUT1 / OUT2.                                   |
| dr1/dr2      | Switch-off delay for OUT1 / OUT2.                                  |
| P-n          | Output logic: pnp / npn.                                          |
| dAP          | Damping for the switching outputs.                                 |
| diS          | Update rate and orientation of the display.                       |
| rES          | Restore factory settings.                                         |
9 Parameter setting

During parameter setting the unit remains in the operating mode. It continues its monitoring function with the existing parameters until the parameter setting has been completed.

9.1 General parameter setting

3 steps must be taken for each parameter setting:

<table>
<thead>
<tr>
<th>Step</th>
<th>Task</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Parameter selection&lt;br&gt;► Press [Mode/Enter] until the requested parameter is displayed.</td>
</tr>
<tr>
<td>2</td>
<td>Setting of the parameter value&lt;br&gt;► Press [Set] and keep it pressed.&lt;br&gt;Current setting value of the parameter flashes for 5 s.&lt;br&gt;After 5 s: setting value is changed: incrementally by pressing the button once or continuously by keeping the button pressed.</td>
</tr>
<tr>
<td>3</td>
<td>Acknowledgement of the parameter value&lt;br&gt;► Press [Mode/Enter] briefly.&lt;br&gt;The parameter is displayed again.&lt;br&gt;The new setting value is stored.</td>
</tr>
</tbody>
</table>

Setting of other parameters:<br>► Start again with step 1.

Finishing the parameter setting:<br>► Press [Mode/Enter] several times until the current measured value is displayed or wait for 15 s.<br>► The unit returns to the operating mode.

- If [SLoc] is displayed when attempting a modification of a parameter value, the sensor is locked via software. This locking can only be removed via a parameter setting software.
• Change from menu level 1 to menu level 2:

► Press [Mode/Enter] until [EF] is displayed.
If the submenu is protected with an access code, "Cod1" flashes in the display.
► Press [Set] and keep it pressed until the valid code no. is displayed.
On delivery by ifm electronic: no access restriction.

► Press [Set] briefly.
> The first parameter of the sub-menu is displayed (here: [Uni]).

With the user interface of the ifm Container program:
► Activate the [EF] button.
If menu level 2 is protected by an access code, the input field for the code no. is activated.
► Enter valid code no.

• Locking / unlocking
The unit can be locked electronically to prevent unintentional settings.

► Make sure that the unit is in the normal operating mode.
► Press [Mode/Enter] + [Set] for 10 s.
> [Loc] is displayed.

During operation: [Loc] is briefly displayed if you try to change parameter values.

For unlocking:
► Press [Mode/Enter] + [Set] for 10 s.
> [uLoc] is displayed.

On delivery: unlocked.

• Timeout:
If no button is pressed for 15 s during parameter setting, the unit returns to the operating mode with unchanged values.
### 9.2 Configuring the display (optional)

- Select [Uni] and set the unit of measurement:
  - [bar], [mbar], [MPa], [kPa], [PSI], for PN7207 and PN7209 in addition [inHg].

- Select [diS] and set update rate and orientation of the display:
  - [d1]: Update of the measured value every 50 ms.
  - [d2]: Update of the measured value every 200 ms.
  - [d3]: Update of the measured value every 600 ms.
  - [rd1], [rd2], [rd3]: Display like d1, d2, d3; rotated by 180°.
  - [OFF]: The display is deactivated in the operating mode.

### 9.3 Setting the output signals

#### 9.3.1 Setting of the output function

- Select [OU1] and set the function:
  - [Hno] = hysteresis function / normally open
  - [Hnc] = hysteresis function / normally closed,
  - [Fno] = window function / normally open,
  - [Fnc] = window function / normally closed

- Select [OU2] and set the function:
  - [Hno] = hysteresis function / normally open,
  - [Hnc] = hysteresis function / normally closed,
  - [Fno] = window function / normally open,
  - [Fnc] = window function / normally closed,
  - [dESI] = output 2 is used as a diagnostic output.

#### 9.3.2 Setting of the switching limits

- Select [SP1] / [SP2] and set the value at which the output switches.

- Select [rP1] / [rP2] and set the value at which the output switches off. rP is always smaller than SP. The unit only accepts values which are lower than the value for SP.

9.4 User settings (optional)

9.4.1 Setting of a time delay for the switching signals

► Select [dS1], [dS2], [dr1] or [dr2] and set a value between 0.1 and 50 s
(at 0.0 the delay time is not active).

9.4.2 Setting of the output logic for the switching outputs
► Select [P-n] and set [PnP] or [nPn].

9.4.3 Setting of the damping for the switching outputs
► Select [dAP] and set a value.

dAP value = response time between pressure change and change of the
switching status in milliseconds.
The following fix values can be set; they define the switching frequency (f)
of the output:

<table>
<thead>
<tr>
<th>dAP</th>
<th>3</th>
<th>6</th>
<th>10</th>
<th>17</th>
<th>30</th>
<th>60</th>
<th>125</th>
<th>250</th>
<th>500</th>
</tr>
</thead>
<tbody>
<tr>
<td>f [Hz]</td>
<td>170</td>
<td>80</td>
<td>50</td>
<td>30</td>
<td>16</td>
<td>8</td>
<td>4</td>
<td>2</td>
<td>1</td>
</tr>
</tbody>
</table>

9.5 Service functions

9.5.1 Reading the min./max. values for the system pressure
► Select [HI] or [LO], press [Set] briefly.

[HI] = maximum value, [LO] = minimum value.
Delete memory:
► Select [HI] or [LO].
► Press [Set] until [----] is displayed.
[LO] is available only for PN7204 and PN7209.

9.5.2 Reset all parameters to factory setting
► Select [rES].
► Press [Set] and keep it pressed until [----] is displayed.
It is recommended to take down your own settings in the table before
carrying out a reset (→13 Factory setting).
10 Operation

After power on, the unit is in the Run mode (= normal operating mode). It carries out its measurement and evaluation functions and provides output signals according to the set parameters.

Operating indications → chapter 7 Operating and display elements.

10.1 Reading of the set parameters

- Press [Mode/Enter] until the requested parameter is displayed.
- Press [Set] briefly.

> The unit displays the corresponding parameter value for about 15 s. After another 15 s the unit returns to the Run mode.

10.2 Fault indication

<table>
<thead>
<tr>
<th>[OL]</th>
<th>Overload pressure (measuring range exceeded)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[UL]</td>
<td>Underload pressure (below measuring range)</td>
</tr>
<tr>
<td>[SC1]</td>
<td>Short circuit in OUT1*</td>
</tr>
<tr>
<td>[SC2]</td>
<td>Short circuit in OUT2*</td>
</tr>
<tr>
<td>[SC]</td>
<td>Short circuit in both outputs*</td>
</tr>
<tr>
<td>[Err]</td>
<td>Flashing: internal fault</td>
</tr>
</tbody>
</table>

*The output concerned is switched off as long as the short circuit exists. The messages SC1, SC2, SC, and Err are shown even if the display is switched off.
11 Scale drawing

- Dimensions are in millimeters
- 1 = dimensions for PN7200
- 1: display
- 2: LED's
- 3: programming button

12 Technical data

- Operating voltage [V]: 18...36 DC
- Current consumption [mA]: < 50
- Current rating per switching output [mA]: 250
- Reverse polarity protection, overload protection: up to 40 V
- Short-circuit protection; Integrated watchdog
- Voltage drop [V]: < 2
- Power-on delay time [s]: 0.3
- Switching frequency [Hz]: max. 170
