Operating instructions
SENSOR TESTPAK
Test device for DC sensors
E18401
1 Symbols used
► Instruction
> Reaction, result
→ Cross-reference

Important note:
Non-compliance can result in malfunctions or interference.

2 Functions and features
The SENSOR TESTPAK is a test device for most 2-, 3- or 4-wire DC sensors. The function can be tested without removing the sensor. By means of the setting function sensors with a setting input can be set.

The SENSOR TESTPAK tests no AC sensors.

3 Electrical connection
► Insert 6 AA batteries (→ 8.1).
► Disconnect the sensor to be tested.
► Connect the sensor to the SENSOR TESTPAK (→ 3.1).
> LED lights green = SENSOR TESTPAK is ready for operation.
> LED lights red = low battery status (→ 8.1).

3.1 Wiring diagram

<table>

<td>brown (1)</td>
<td>black (4)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

European colour codes are indicated in the wiring diagram. They can be different for some sensors. In case of doubt follow the wiring instructions of the manufacturer.
4 Operating and display elements

<tr>
<td>T</td>
<td>green</td>
<td>setting function</td>
<td>setting button pressed</td>
</tr>
</tbody>
</table>

LED Display Status Description
- green: power, sensor connected, device ready for operation
- red: battery, low battery status, replace batteries
- yellow (PNP/NPN): target present, NO; target not present, NC
- T: green: setting function, setting button pressed, setting output active

5 Operation
Test operation with an inductive sensor as an example:

► Move a suitable metallic target in front of the sensing face of the sensor. Ideally, the target to be detected in the application.

> If the sensor is damped so that the output switches, the SENSOR TESTPAK indicates this acoustically and visually (→ 4).

→ You can find more details and correction factors in the data sheet of the sensor manufacturer.

The SENSOR TESTPAK switches off automatically as soon as the voltage supply to the sensor is interrupted.
5.1 Setting function
The button is electrically connected to the terminal T of the SENSOR TESTPAK. By pressing the button the positive battery voltage is applied to terminal T. Sensors with a setting input can be set in this way.

8 Maintenance, repair and disposal
In case of correct use no maintenance and repair measures are necessary.
Only the manufacturer is allowed to repair the device.
After use dispose of the device in an environmentally friendly way in accordance with the applicable national regulations.

8.1 Battery replacement
► Disconnect the sensor from the SENSOR TESTPAK.
► Remove the cover of the battery compartment on the bottom side of the SENSOR TESTPAK from the housing in direction of the marking.
► Remove the battery carrier carefully (risk of wire break).
► Remove all empty batteries and replace them by new ones.
  - Note the indicated polarity when inserting the batteries.
  - Do not use rechargeable batteries.
  - After use dispose of the batteries in an environmentally friendly way.
► Insert the battery carrier into the SENSOR TESTPAK and slide the cover of the battery compartment over the housing.
